

SECURITY RISK MANAGEMENT

Security risk management is the intersection of threats, vulnerabilities and assets, and is fundamental to SCG's approach to security. We have a stepped process for the identification and management of your security risk, which will inform business needs and support your decision making and daily operations.

SCG uses a risk-based approach to all our security consultancy offerings, so you can be sure we are providing mitigation solutions that are tailored to meet the specific needs of your business.

Our risk approach is aligned with international standards and better practice guidelines, such as *ISO 31000 Risk Management* and *HB:167 Security Risk Management*, and has been developed over many years in the security industry in both government and the private sector.

Our team's expertise and experience allows us to adjust the level of security rigour depending on requirements, and our **in-house risk tools and strategies** are flexible enough to incorporate existing risk management frameworks.

Security adviser to state & federal law enforcement & national security agencies

Public & private sector projects delivered across Australia & New Zealand

Risk services across **all major market sectors**

"Our risk assessments enable you to consider the adequacy of existing security controls, prioritise risks for further evaluation and determine which risks are acceptable and which require further treatment."

OUR WORK

NEXTDC, AirTrunk and DUG data centres **Australia-wide | 2019 - 2021**

SCG is the market leader in security risk services for the rapid expansion of data centres throughout Australia and has delivered over 40 security risk projects for some of the Asia Pacific's largest operators (in addition to numerous design and construction projects), including security risk assessments, security management plans, peer review, SOPs for dawn raids and SSEC consultancy for upgrades enabling storage of the highest levels of confidential government information.

Mayne Pharma production facility **Adelaide, SA | 2020**

Mayne Pharma's Australian manufacturing site is located on 12ha outside Adelaide and has comprehensive facilities for commercial-scale manufacturing of solid oral and topical pharmaceutical products. SCG was engaged to review security arrangements to provide assurance regarding compliance with relevant codes and legislation, improve security governance and ensure physical, technical and personnel security at the facility.

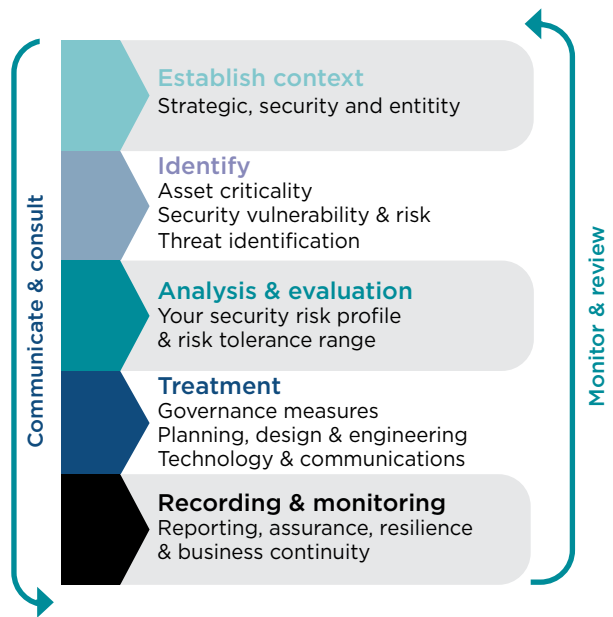

SECURITY RISK MANAGEMENT

IMPROVING SECURITY EFFECTIVENESS

Our risk treatment plans and recommendations are designed to reduce your organisation's risk and improve security effectiveness, enabling you to make informed decisions regarding risk posture, and current and future capital and operating expenditure.

Our specialist team of security and risk experts understand current and emerging security trends and international, domestic and local context, including geopolitical, regulatory, social, economic, community and environmental risk factors.

They maintain close networks with the security, policing and intelligence communities, enabling them to see beyond the event horizon to anticipate and address credible threats and risks, and consider your business's vision, objectives and operational constraints as part of an assessment of your risk.

SCG'S RISK MANAGEMENT PROCESS

(Modified from ISO 31000 & aligned with the Australian Government's Protective Security Policy Framework: Security Planning and Risk Management.)

OUR WORK

Museums Victoria Melbourne, VIC | 2016

SCG was engaged to develop a security management framework for Museums Victoria through which it could identify, manage and respond to risks at its extensive network of museum and storage sites throughout the state. Following an initial review, framework development via a working group of key stakeholders and plan implementation, the client was delivered an integrated framework of security policies, plans and procedures ready for endorsement by the Board and Executive.

Western Power Perth, WA | 2020

Security risk assessments conducted by SCG have been an integral part of design and construction of electricity infrastructure by Western Power, the state-owned corporation responsible for building, maintaining and operating the electricity network in WA. We've been engaged to complete these across many existing and new sites to identify security vulnerabilities, inform the planning process and contribute to the strategic management of risk within the corporation.
